

## 3D DOMING KITS

For a small investment you can enjoy extra profit by transforming Screen Printed and Digitally Printed labels, badges, and decals, into attractive high quality 3D domed items - **with real added value!**

The 3D doming process is quite easy to master by following the instructions given with each Starter Kit. 3D domes can be applied to die-cut or plotter cut labels, to badges, cut out lettering, decals, and engraved badges and plates, in fact to any non-porous surface. It is however essential that the items to be domed are perfectly flat and are held in a horizontal position whilst the doming resin is being applied and whilst curing.

Once set the resin forms a crystal clear lens that can vary in hardness from very soft and flexible to glass hard according to the type of resin used. No matter which resin is used the domes produced will not go yellow or brittle, will resist scratching and will help to protect the domed surface from fading effects caused by UV in normal sunlight

MDS 3D doming kits contain everything you need to get started in the profitable world of 3D doming. The Starter Kit contains the MDS dispensing gun, a bubble remover gas gun, 12 standard grade polyurethane resin 50gram cartridges, 12 mixer tubes, three pairs of disposable gloves and written instructions. Refill kits of resin filled cartridges are available in 50gram and 400 gram and in different grades.

A range of polyurethane resins are available in 50 gram cartridges as follows:-

#### **MDS Standard**

Automotive grade flexible general purpose resin suitable for most indoor or outdoor doming applications.

#### **MDS Flexible**

This very flexible low hardness resin is specifically designed for doming labels to adhere to curved surfaces, but with the same outdoor durability as the rest of the range.

#### **MDS High Build**

Our special high viscosity resin is highly suitable for signs, plot cut vinyl letters, or very large labels or decals, or anywhere a higher than normal dome is required.

#### **MDS Hard**

Cures to give domes with a glass like hard finish, and is thus an ideal replacement for epoxy-resin where the non-yellowing properties of polyurethane are required.

### **Special 'Desktop' Print and Dome Media**

Where you do not have access to a solvent ink jet printer, this special media will allow you to produce superb domed labels using your standard desktop inkjet printer. Available from us in packs of 25 or 50 sheets per pack A3 size, and in 50 sheets per pack A4 size, in silver or white. Contact us for prices and application details.
