The **NEW!**

Mockridge Doming Systems Inc.

VariSCRIPT

Multi Axis CNC *Scripting* Doming Machine

No Learning curve!

Uses the same graphics software you are already familiar with.

If you already use one of these.....

Adobe illustrator, *CorelDraw*, Flexisign, *SIGNLAB*, Power CAD

.....then you can already use the MDS VariSCRIPT!

No time wasting templates to construct. Everything is visible on the screen, just click and drag to make adjustments to the doming path. Just change the path color to increase or reduce the output to match the requirements of the design. The software CD is a 'plug in' and adds just one additional item to the File Menu of your favorite graphics program. This reveals a dialogue box for setting the color coded output ratios, doming paths, etc.

Variable Electronic Ratio Control

Just dial in the ratio you require. Use resin from any supplier regardless of the ratio. The VariSCRIPT has all the features listed for the MDS VariDome. You are not tied to one supplier. Important! YOUR WARRANTY is not affected if you use another supplier for resin. Naturally, we hope that we would provide you with the top class product and service you have the right to expect, but if we let you down, (or for whatever reason) you decide to use another supplier, that is your right and will not affect in any way our service to you.

Variable Output Dispensing

The unique MDS Color Coded Variable Output Dispensing makes this a true Scripting Machine. *(Ever noticed how the domed letters used for demonstrating our competitor's machines always have the same wall thickness throughout the design? With our variable output system the design can consist of thick and thin lines, and all are domed in one operation.*

32" x 20" Doming Area

Probably the largest in the industry, but CERTAINLY the largest at this price! (See price below). The doming track is variable, to enable you to use any size of doming tray for ease of handling, up to and including the maximum doming area.

Automatic Part Detection

It's simple! If the laser does not detect the labels are in position, the machine will not move. So, no messy wasted resin and labels.

Automatic Orientation and Alignment

This is also pretty straightforward. If the sheet is not parallel to the track the VariSCRIPT will automatically adjust its orientation to correct the error.

Modular Construction

Easy service, maintenance, and upgrade path. Just add or change the module.

Automated Resin Transfer

Pumped resin supply from ground level. Liquid polyurethane is dispensed directly from the delivery containers. No heavy lifting. No time wasting decanting of resins into separate containers.

Nitrogen Blanket

Ensures the longest possible shelf life for the liquid polyurethane.

Vacuum Pre-Treatment

For a bright bubble free finish to your domed labels.

5 Day Installation and Training

5 Day Installation and Training on your premises (Anywhere within continental USA) included, at no extra charge. (It doesn't matter if we train one person, or a roomful, its still free)

A Fair Price!

With all the advantages listed above the launch price for the MDS VariSCRIPT is over **\$30,000** lower in price than our nearest competitor. This will enable you to get a quicker payback on your investment. But act quickly, as this price must increase soon.

No Tricks!

Finally, just to put your mind at rest. The price includes everything, so no sneaky extra charges for the software or other essentials.
